A New Level of Renovation with See-through View

LUXMAGE's technologies and products will give you true advantages in your markets!

About Us

LUXMAGE focuses on the research, development and production of transparent LED displays, providing customers with total transparent display solutions.

As a pioneer in transparent screen technology in Vietnam, we are responsible for providing customers with more transparent, brighter LED display products with stable quality and reasonable price.

Our products are widely used in window advertising, retail chain stores, shopping malls, airports, financial institutions, 4S auto shops, exhibitions, stages, building murals curtain wall, transportation and other fields.

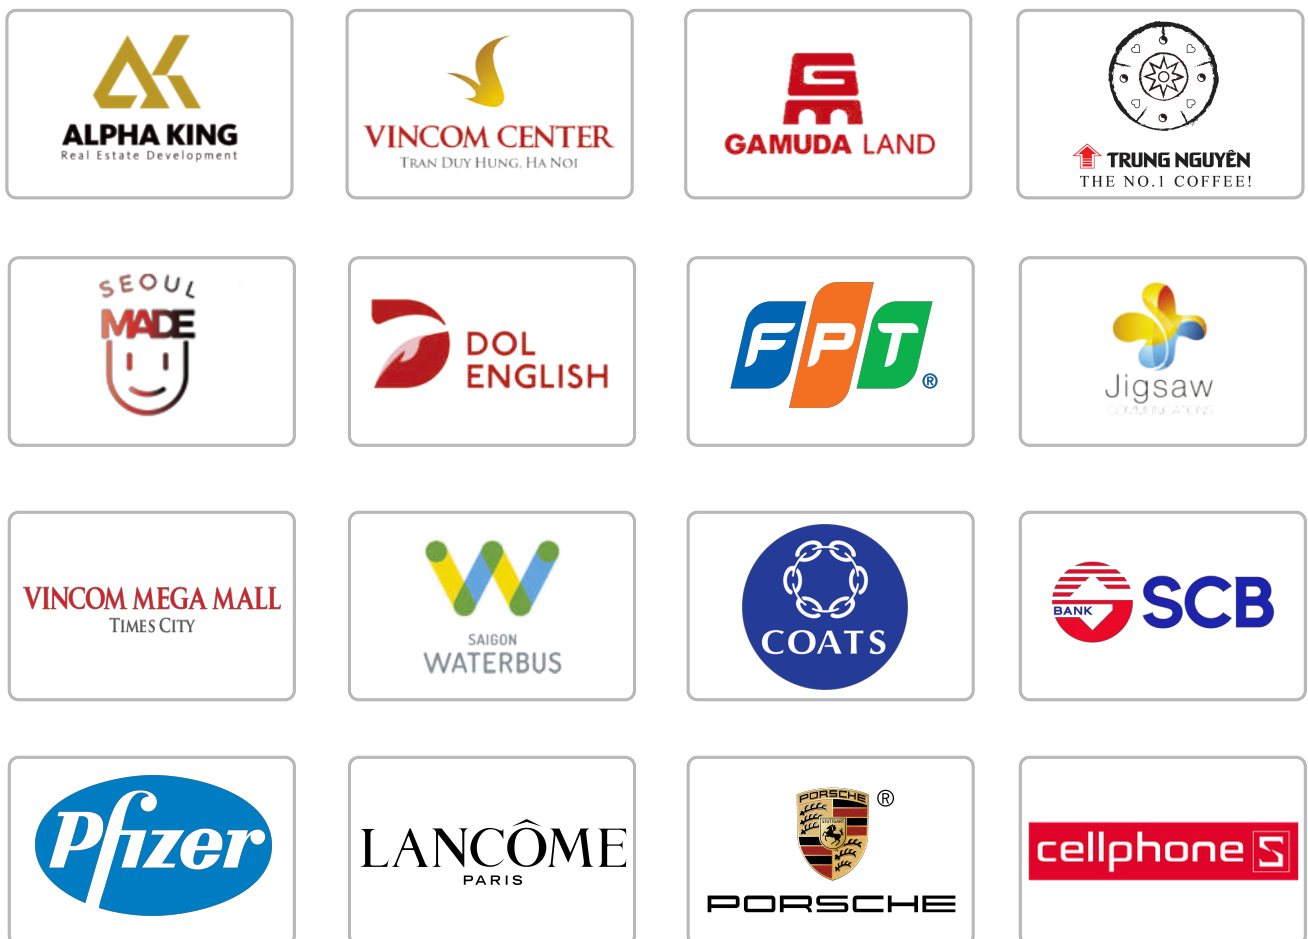

Our partners include Vincom Times City, Alpha King, Seoul made (Korea), GamudaLAND, Trung Nguyen Legend, Dol English, SCBank, Coats Group, Pfizer Inc, Porsche, Lancome, etc.

LUXMAGE products and services will give you a real edge in your market.

Some well-known companies which have made great choices!

Transparent Displays' Merits

High transparency and lighting

With transparency up to 55%-92%, the transparent LED screen is almost imperceptible from 3 meters away. Compared with the traditional LED screen, it has several features: high transparency, not blocking natural day light to enter the space and has limited obstruction of the indoor to outdoor line of sight.

Technology

The transparency on the displays shows a sense of technology and design due to its translucency.

Approvals and regulations

The transparent LED screens applied to curtain walls are installed indoors and displayed outward, which facilitates urban regulations approvals.

Simple and easy installation

For PCB strip screens, cabinets can be mounted on top of another quickly.

Fourth Generation PCB Strip Screens

Retail Store Windows Series

LKV series is specially designed for window advertising in retail stores. To adjust to the size of your windows, simply select the right modules from different available dimensions then attach them into a single screen. Keeping a high resolution without affecting the transparency is key.

Free-cutting

Easy installation

LUXMAGE transparent film LED screen (LF series) applies the Drive-IN LED technology which is independently developed by LUXMAGE. The use of polycarbonate as the substrate and a highly transparent PET film on the surface greatly enhances the flexibility of the transparent film LED screen applications, which can meet the individual needs of various curved and special-shaped building facades. Through the research and innovation of software and hardware, the NW series has the characteristics of being light, thin, transparent, free bending and intelligent control.
